Maturity Date* March , 2028

*Subject to change based on the actual date the notes are priced for initial sale to the public (the "pricing date")

BofA Finance LLC Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation) Linked to the Worst-Performing of the S&P 500® Index, the Nasdaq-100 Index® and the Russell 2000® Index Fully and Unconditionally Guaranteed by Bank of America Corporation

- A Contingent Coupon Payment of between [\$0.250 and \$0.275] (equal to a rate of between approximately [10.00% and 11.00%] per annum) payable on the applicable Coupon Payment Date if the closing level of each of the S&P 500® Index, the Nasdaq-100 Index® and the Russell 2000® Index (each an "Index" and collectively the "Indices"), on each trading day during the applicable quarterly Observation Period is greater than or equal to 70% of its Starting Value.
- Callable by the Issuer in whole prior to maturity on any quarterly Call Payment Date beginning approximately three months after the pricing date. If the notes are called, on the applicable Call Payment Date you will receive the principal amount of your notes *plus* any Contingent Coupon Payment that may otherwise be due. No further amounts will be payable following a call.
- If not called, a maturity of approximately three years.
- If not called, at maturity, if the level of the Worst-Performing Market Measure has not decreased by more than 30%, a return of principal; otherwise, 1-to-1 downside exposure to decreases in the Worst-Performing Market Measure from its Starting Value, with up to 100.00% of the principal amount at risk. At maturity the final Contingent Coupon Payment will also be payable if the closing level of each Index on each trading day during the final quarterly Observation Period is greater than or equal to 70% of its Starting Value.
- The notes are not linked to a basket composed of the Indices. Any depreciation in the level of one Index will not be offset by any appreciation in the level of any other Index.
- All payments are subject to the credit risk of BofA Finance LLC, as issuer of the notes, and the credit risk of Bank of America Corporation, as guarantor of the notes
- Limited secondary market liquidity, with no exchange listing

The notes are being issued by BofA Finance LLC ("BofA Finance") and are fully and unconditionally guaranteed by Bank of America Corporation ("BAC"). Investing in the notes involves a number of risks. There are important differences between the notes and a conventional debt security, including different investment risks and certain additional costs. See "Risk Factors" beginning on page TS-7 of this term sheet, "Additional Risk Factors" on page TS-8 of this term sheet, and "Risk Factors" beginning on page PS-10 of the accompanying product supplement, page S-6 of the accompanying Series A MTN prospectus supplement and page 7 of the accompanying prospectus.

The initial estimated value of the notes as of the pricing date is expected to be between \$9.375 and \$9.875 per unit, which is less than the public offering price listed below. See "Summary" on the following page, "Risk Factors" beginning on page TS7 of this term sheet and "Structuring the Notes" on page TS20 of this term sheet for additional information. The actual value of your notes at any time will reflect many factors and cannot be predicted with accuracy.

None of the Securities and Exchange Commission (the "SEC"), any state securities commission, or any other regulatory body has approved or disapproved of these securities or determined if this Note Prospectus (as defined below) is truthful or complete. Any representation to the contrary is a criminal offense.

	<u>Per Unit</u>	<u>Total</u>
Public offering price	\$ 10.000	\$
Underwriting discount ⁽¹⁾	\$ 0.075	\$
	\$ 0.050	\$
Proceeds, before expenses, to BofA Finance	\$ 9.875	\$

(1) The underwriting discount reflects a sales commission of \$0.075 per unit and a structuring fee of \$0.050 per unit.

BofA Securities

March , 2025

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500® Index, the Nasdaq-100 Index® and the Russell 2000® Index, due March , 2028

Summary

The Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation) Linked to the Worst-Performing of the S&P 500® Index, the Nasdaq-100 Index® and the Russell 2000® Index, due March , 2028 (the “notes”) are our senior unsecured debt securities. Payments on the notes are fully and unconditionally guaranteed by BAC. The notes and the related guarantee are not insured by the Federal Deposit Insurance Corporation or secured by collateral. **The notes will rank equally in right of payment with all of BofA Finance’s other unsecured and unsubordinated obligations, except obligations that are subject to any priorities or preferences by law, and the related guarantee will rank equally in right of payment with all of BAC’s other unsecured and unsubordinated obligations, except obligations that are subject to any priorities or preferences by law, and senior to its subordinated obligations. Any payments due on the notes, including any repayment of principal, will be subject to the credit risk of BofA Finance, as issuer, and BAC, as guarantor.** The notes will pay a Contingent Coupon Payment of between [\$0.250 and \$0.275] (equal to a rate of between approximately [10.00% and 11.00%] per annum) on the applicable Coupon Payment Date if the Observation Value of each Index on each Market Measure Business Day during the applicable quarterly Observation Period is greater than or equal to its Coupon Barrier. The notes will be callable by the Issuer in whole prior to maturity on any Call Payment Date. If your notes are called, you will receive the Call Payment on the applicable Call Payment Date, and no further amounts will be payable on the notes. If your notes are not called, at maturity, if the Ending Value of the Worst-Performing Market Measure (as described below) is greater than or equal to its Threshold Value, you will receive the principal amount; otherwise, your notes are subject to 1-to-1 downside exposure to decreases in the Worst-Performing Market Measure from its Starting Value, with up to 100.00% of the principal amount at risk. At maturity the final Contingent Coupon Payment will also be payable if the Observation Value of each Index on each Market Measure Business Day during the final Observation Period is greater than or equal to its Coupon Barrier. All payments on the notes will be calculated based on the \$10 principal amount per unit and will depend on the performance of the Worst-Performing Market Measure, subject to our and BAC’s credit risk. See “Terms of the Notes” below.

The economic terms of the notes are based on BAC’s internal funding rate, which is the rate it would pay to borrow funds through the issuance of market-linked notes and the economic terms of certain related hedging arrangements. BAC’s internal funding rate is typically lower than the rate it would pay when it issues conventional fixed or floating rate debt securities. This difference in funding rate, as well as the underwriting discount and costs associated with hedging the notes, will reduce the economic terms of the notes to you and the initial estimated value of the notes on the pricing date. Due to these factors, the public offering price you pay to purchase the notes will be greater than the initial estimated value of the notes.

On the cover page of this term sheet, we have provided the initial estimated value range for the notes. This initial estimated value range was determined based on our, BAC’s and our other affiliates’ pricing models, which take into consideration BAC’s internal funding rate and the market prices for the hedging arrangements related to the notes. The initial estimated value of the notes calculated on the pricing date will be set forth in the final term sheet made available to investors in the notes. For more information about the initial estimated value and the structuring of the notes, see “Structuring the Notes” on page TS-20 of this term sheet.

Terms of the Notes

Issuer:	BofA Finance LLC (“BofA Finance”)
Guarantor:	Bank of America Corporation (“BAC”)
Principal Amount:	\$10.00 per unit
Term:	Approximately three years, if not previously called.
Market Measures:	The S&P 500® Index (Bloomberg symbol: “SPX”), the Nasdaq-100 Index® (Bloomberg symbol: “NDX”) and the Russell 2000® Index (Bloomberg symbol: “RTY”), each a price return index.
Worst-Performing Market Measure:	The Index with the lowest Ending Value as compared to its Starting Value, calculated as follows: $\left(\frac{\text{Ending Value} - \text{Starting Value}}{\text{Starting Value}} \right)$
Call Feature:	Issuer Callable Notes. The Issuer may, in its sole discretion, call the notes, in whole but not in part, on any Call Payment Date. We will give notice to the trustee at least five business days but not more than 60 calendar days before the applicable Call Payment Date.
Barrier:	Applicable
Coupon Barrier:	With respect to each Index, 70% of its Starting Value
Threshold Value:	With respect to each Index, 70% of its Starting Value
Contingent Coupon Payments:	Notwithstanding anything to the contrary in the accompanying product supplement, the notes will pay a Contingent Coupon Payment of between [\$0.250 and \$0.275] per unit (equal to a rate of between approximately [10.00% and 11.00%] per annum) on the applicable Coupon Payment Date if the Observation Value of each Index on each Market Measure Business Day during the applicable quarterly Observation Period is greater than or equal to its Coupon Barrier. The actual Contingent Coupon Payment will be determined on the pricing date.
Call Payment:	The principal amount <i>plus</i> any Contingent Coupon Payment that may otherwise be due on the applicable Call Payment Date.
Starting Value:	With respect to each Index, its closing level on the pricing date.
Ending Value:	With respect to each Index, its closing level on the Final Calculation Day. The scheduled Final Calculation Day is subject to postponement in the event of Market Disruption Events and non-Market Measure Business Days, as described beginning on page PS-37 of the accompanying product supplement.
Observation Value:	With respect to each Index, its closing level on the relevant Market Measure Business Day.
Observation Period:	Each Observation Period will consist of each Market Measure Business Day from, but excluding, an Observation Period End Date to, and including, the following Observation Period End Date; provided that the first Observation Period will consist of each Market Measure Business Day from, but excluding, the pricing date to, and including, the first Observation Period End Date. Each Market Measure Business Day during an Observation Period is subject to adjustment in the event of Market Disruption Events, as described on page TS-9 of this term sheet.

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500® Index, the Nasdaq-100 Index® and the Russell 2000® Index, due March , 2028

Observation Period End Dates:	Quarterly, on or about June , 2025, September , 2025, December , 2025, March , 2026, June , 2026, September , 2026, December , 2026, March , 2027, June , 2027, September , 2027, December , 2027 and March , 2028 (the final Observation Period End Date).
Final Calculation Day/Maturity Valuation Period:	The final Observation Period End Date
Coupon Payment Dates:	Approximately the fifth business day following the applicable Observation Period End Date; provided however, that the Coupon Payment Date related to the final Observation Period End Date will be the maturity date.
Call Payment Dates:	June , 2025 and each subsequent Coupon Payment Date (excluding the final Coupon Payment Date).
Fees and Charges:	The underwriting discount of \$0.125 per unit listed on the cover page.
Calculation Agent:	BofA Securities, Inc. ("BofAS"), an affiliate of BofA Finance.

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500[®] Index, the Nasdaq-100 Index[®] and the Russell 2000[®] Index, due March , 2028

Determining Payments on the Notes

Contingent Coupon Payments

The notes will pay a Contingent Coupon Payment on the applicable Coupon Payment Date if the Observation Value of each Index on each Market Measure Business Day during the applicable quarterly Observation Period is greater than or equal to its Coupon Barrier.

Redemption Amount Determination

If the notes are not called, on the maturity date, you will receive a cash payment per unit determined as follows:

You will lose all or a significant portion of the principal amount of the notes if the Ending Value of the Worst Performing Market Measure is less than its Threshold Value. Even with any Contingent Coupon Payments, the return on the notes could be negative.

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500[®] Index, the Nasdaq-100 Index[®] and the Russell 2000[®] Index, due March , 2028

The terms and risks of the notes are contained in this term sheet and in the following:

- Product supplement EQUITY CYN-2 dated August 21, 2023:
<https://www.sec.gov/Archives/edgar/data/70858/000119312523216655/d428710d424b2.htm>
- Series A MTN prospectus supplement dated December 30, 2022 and prospectus dated December 30, 2022:
<https://www.sec.gov/Archives/edgar/data/1682472/000119312522315195/d409418d424b3.htm>

These documents (together, the "Note Prospectus") have been filed as part of a registration statement with the SEC, which may, without cost, be accessed on the SEC website at www.sec.gov or obtained from Merrill Lynch, Pierce, Fenner & Smith Incorporated ("MLPF&S") or BofAS by calling 1-800-294-1322. Before you invest, you should read the Note Prospectus, including this term sheet, for information about us, BAC and this offering. Any prior or contemporaneous oral statements and any other written materials you may have received are superseded by the Note Prospectus. Certain terms used but not defined in this term sheet have the meanings set forth in the accompanying product supplement. Unless otherwise indicated or unless the context requires otherwise, all references in this document to "we," "us," "our," or similar references are to BofA Finance, and not to BAC.

Investor Considerations

You may wish to consider an investment in the notes if:

- You understand that the payment of Contingent Coupon Payments, if any, will be based solely on the performance of each Index on each Market Measure Business Day during each Observation Period and that the payment of the Redemption Amount will be based solely on the performance of the Worst-Performing Market Measure.
- You anticipate that the closing level of each Index will be equal to or greater than its Coupon Barrier on each Market Measure Business Day during most or all of the Observation Periods.
- You understand that the notes may be called at the Issuer's discretion, in which case you accept an early exit from your investment.
- You anticipate that the Worst-Performing Market Measure will not decrease from its Starting Value to an Ending Value that is below its Threshold Value.
- You accept that the return on the notes will be limited to the return represented by the Contingent Coupon Payments even if the percentage change in the levels of the Indices are significantly greater than such return.
- You are willing to lose up to 100% of the principal amount if the notes are not called.
- You are willing to forgo dividends or other benefits of owning the stocks included in each Index.
- You are willing to accept a limited or no market for sales of the notes prior to maturity, and understand that the market prices for the notes, if any, will be affected by various factors, including our and BAC's actual and perceived creditworthiness, BAC's internal funding rate and fees and charges on the notes.
- You are willing to assume our credit risk, as issuer of the notes, and BAC's credit risk, as guarantor of the notes, for all payments under the notes, including the Redemption Amount.

The notes may not be an appropriate investment for you if:

- You are unwilling to accept that payment of Contingent Coupon Payments, if any, will be based solely on the performance of each Index on each Market Measure Business Day during each Observation Period and that the payment of the Redemption Amount will be based solely on the performance of the Worst-Performing Market Measure.
- You anticipate that the closing level of at least one Index will be less than its Coupon Barrier on at least one Market Measure Business Day during most or all of the Observation Periods and less than its Threshold Value on the Final Calculation Day.
- You wish to make an investment that cannot be called at the Issuer's discretion prior to maturity.
- You seek an uncapped return on your investment.
- You seek principal repayment or preservation of capital.
- You want to receive dividends or other distributions paid on the stocks included in any Index.
- You seek an investment for which there will be a liquid secondary market.
- You are unwilling or are unable to take market risk on the notes, to take our credit risk, as issuer of the notes, or to take BAC's credit risk, as guarantor of the notes.

We urge you to consult your investment, legal, tax, accounting, and other advisors before you invest in the notes.

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500[®] Index, the Nasdaq-100 Index[®] and the Russell 2000[®] Index, due March , 2028

Examples of Hypothetical Payments

The following examples are for purposes of illustration only. They assume that the notes have not been called prior to maturity and are based on hypothetical values and show hypothetical returns on the notes. They illustrate the calculation of the Contingent Coupon Payment or the Redemption Amount, as applicable, based on the hypothetical terms set forth below. The actual amount you receive and the resulting return will depend on the actual Starting Value, Coupon Barrier, Threshold Value and Ending Value of each Index, the actual Observation Values of each Index on each Market Measure Business Day during each Observation Period, the actual Contingent Coupon Payments, whether the notes are called prior to maturity and the actual term of your investment. The following examples do not take into account any tax consequences from investing in the notes. These examples are based on:

- 1) a hypothetical Starting Value of 100.00 for each Index;
- 2) a hypothetical Coupon Barrier of 70.00 for each Index;
- 3) a hypothetical Threshold Value of 70.00 for each Index;
- 4) an expected term of the notes of approximately three years if the notes are not called on any Call Payment Date;
- 5) a hypothetical Contingent Coupon Payment applicable to a single Coupon Payment Date of \$0.2625 per unit (the mid-point of the Contingent Coupon Payment range); and
- 6) the Observation Period End Dates occurring quarterly during the term of the notes.

The **hypothetical** Starting Value of 100.00 for each Index used in these examples has been chosen for illustrative purposes only, and does not represent a likely actual Starting Value of any Index. For recent actual levels of the Indices, see "The Indices" section below. Each Index is a price return index and as such the levels of each Index will not include any income generated by dividends paid on the stocks included in such Index, which you would otherwise be entitled to receive if you invested in those stocks directly. In addition, all payments on the notes are subject to issuer and guarantor credit risk.

Example 1 – The Observation Value of at least one Index on at least one Market Measure Business Day during the first Observation Period is below its Coupon Barrier. Therefore, no Contingent Coupon Payment will be paid on the applicable Coupon Payment Date.

Example 2 - The Observation Value of at least one Index on at least one Market Measure Business Day during the first Observation Period is below its Coupon Barrier. Therefore, no Contingent Coupon Payment is paid on the applicable Coupon Payment Date. The Observation Value of each Index on each Market Measure Business Day during the second Observation Period is greater than or equal to its Coupon Barrier. Therefore, a Contingent Coupon Payment of \$0.2625 per unit will be paid on the related Coupon Payment Date.

Example 3 - The Observation Value of at least one Index on at least one Market Measure Business Day during the final Observation Period is below its Coupon Barrier. Therefore, no Contingent Coupon Payment will be paid at maturity. However, the Ending Value of the Worst-Performing Market Measure is 75.00, which is greater than its Threshold Value. The Redemption Amount will equal \$10.00 per unit.

Example 4 - The Observation Value of each Index on each Market Measure Business Day during the final Observation Period is greater than or equal to its Coupon Barrier. Therefore, a Contingent Coupon Payment will be paid at maturity. In addition, the Ending Value of the Worst-Performing Market Measure is 95.00, which is greater than its Threshold Value. The Redemption Amount will equal \$10.00 plus the final Contingent Coupon Payment = \$10.2625 per unit.

Example 5 - The Observation Value of at least one Index on at least one Market Measure Business Day during the final Observation Period is below its Coupon Barrier. Therefore, no Contingent Coupon Payment will be paid at maturity. If the Ending Value of the Worst-Performing Market Measure is less than its Threshold Value, the Redemption Amount will be less, and possibly significantly less, than the principal amount. For example, if the Ending Value of the Worst-Performing Market Measure is 50.00, the Redemption Amount per unit will be:

$$\$10 - \left[\$10 \times \frac{100 - 50}{100} \right] = \$5.00$$

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500[®] Index, the Nasdaq-100 Index[®] and the Russell 2000[®] Index, due March , 2028

Risk Factors

There are important differences between the notes and a conventional debt security. An investment in the notes involves significant risks, including those listed below. You should carefully review the more detailed explanation of risks relating to the notes in the "Risk Factors" sections beginning on page PS-10 of the accompanying product supplement, page S-6 of the Series A MTN prospectus supplement, and page 7 of the prospectus identified above. The notes are not an appropriate investment for you if you are not knowledgeable about significant elements of the notes or financial matters in general. We also urge you to consult your investment, legal, tax, accounting, and other advisors before you invest in the notes.

Structure-related Risks

- If the notes are not called and the Ending Value of the Worst-Performing Market Measure is less than its Threshold Value, you will lose up to 100% of the principal amount.
- Your investment return is limited to the return represented by the Contingent Coupon Payments, if any, and may be less than a comparable investment directly in the stocks included in any Index.
- You may not receive any Contingent Coupon Payments. If the Observation Value of at least one Index is less than its Coupon Barrier on at least one Market Measure Business Day during each Observation Period, you will not receive any Contingent Coupon Payments over the term of the notes and will not receive a positive return on the notes.
- If the notes are called by the Issuer, you will be subject to reinvestment risk, and you will lose the opportunity to receive Contingent Coupon Payments, if any, that otherwise might have been payable after the date of the call.
- The notes are subject to the risks of each Index, not a basket composed of the Indices, and will be negatively affected if the level of any Index decreases below its Coupon Barrier on any Market Measure Business Day during any Observation Period or below its Threshold Value on the Final Calculation Day, even if the level of each other Index is above its Coupon Barrier or Threshold Value as of those days.
- You will not benefit in any way from the performance of the better performing Indices.
- Because the notes are linked to three indices, as opposed to only one, it is more likely that a Contingent Coupon Payment will not be payable on any given Coupon Payment Date or that the Ending Value of an Index will be less than its Threshold Value on the Final Calculation Day, and consequently, you will not receive a positive return on the notes and will lose some or all of your investment.
- You will be subject to risks relating to the relationship between the Indices. The less correlated the Indices, the more likely it is that the Observation Value of one of the Indices will be below its Coupon Barrier on at least one Market Measure Business Day during any Observation Period or below its Threshold Value on the Final Calculation Day.
- Your return on the notes may be less than the yield you could earn by owning a conventional fixed or floating rate debt security of comparable maturity.
- Payments on the notes are subject to our credit risk, and the credit risk of BAC, and any actual or perceived changes in our or BAC's creditworthiness are expected to affect the value of the notes. If we and BAC become insolvent or are unable to pay our respective obligations, you may lose your entire investment.
- We are a finance subsidiary and, as such, have no independent assets, operations or revenues.
- BAC's obligations under its guarantee of the notes will be structurally subordinated to liabilities of its subsidiaries.
- The notes issued by us will not have the benefit of any cross-default or cross-acceleration with other indebtedness of BofA Finance or BAC; events of bankruptcy or insolvency or resolution proceedings relating to BAC and covenant breach by BAC will not constitute an event of default with respect to the notes.

Valuation- and Market-related Risks

- The initial estimated value of the notes considers certain assumptions and variables and relies in part on certain forecasts about future events, which may prove to be incorrect. The initial estimated value of the notes is an estimate only, determined as of a particular point in time by reference to our and our affiliates' pricing models. These pricing models consider certain assumptions and variables, including our credit spreads and those of BAC, BAC's internal funding rate on the pricing date, mid-market terms on hedging transactions, expectations on interest rates and volatility, price-sensitivity analysis, and the expected term of the notes. These pricing models rely in part on certain forecasts about future events, which may prove to be incorrect.
- The public offering price you pay for the notes will exceed the initial estimated value. If you attempt to sell the notes prior to maturity, their market value may be lower than the price you paid for them and lower than the initial estimated value. This is due to, among other things, changes in the levels of the Indices, changes in BAC's internal funding rate, and the inclusion in the public offering price of the underwriting discount and costs associated with hedging the notes, all as further described in "Structuring the Notes" on page TS-20 of this term sheet. These factors, together with various credit, market and economic

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500[®] Index, the Nasdaq-100 Index[®] and the Russell 2000[®] Index, due March , 2028

factors over the term of the notes, are expected to reduce the price at which you may be able to sell the notes in any secondary market and will affect the value of the notes in complex and unpredictable ways.

- The initial estimated value does not represent a minimum or maximum price at which we, BAC, MLPF&S, BofAS or any of our other affiliates would be willing to purchase your notes in any secondary market (if any exists) at any time. The value of your notes at any time after issuance will vary based on many factors that cannot be predicted with accuracy, including the performance of the Indices, our and BAC's creditworthiness and changes in market conditions.
- A trading market is not expected to develop for the notes. None of us, BAC, MLPF&S or BofAS is obligated to make a market for, or to repurchase, the notes. There is no assurance that any party will be willing to purchase your notes at any price in any secondary market.

Conflict-related Risks

- BAC and its affiliates' hedging and trading activities (including trades in shares of companies included in the Indices) and any hedging and trading activities BAC or its affiliates engage in that are not for your account or on your behalf, may affect the market value and return of the notes and may create conflicts of interest with you.
- There may be potential conflicts of interest involving the calculation agent, which is an affiliate of ours. We have the right to appoint and remove the calculation agent.

Market Measure-related Risks

- An Index sponsor may adjust its applicable Index in a way that affects its level, and has no obligation to consider your interests.
- You will have no rights of a holder of the securities represented by the Indices, and you will not be entitled to receive securities or dividends or other distributions by the issuers of those securities.
- While BAC and our other affiliates may from time to time own securities of companies included in the Indices, except to the extent that BAC's common stock is included in any Index, we, BAC and our other affiliates do not control any company included in any Index, and have not verified any disclosure made by any other company.

Tax-related Risks

- The U.S. federal income tax consequences of the notes are uncertain, and may be adverse to a holder of the notes. See "Summary Tax Consequences" below and "U.S. Federal Income Tax Summary" beginning on page PS-51 of the accompanying product supplement.

Additional Risk Factors

The notes are subject to risks associated with foreign securities markets.

The NDX includes certain foreign equity securities. You should be aware that investments in securities linked to the value of foreign equity securities involve particular risks. The foreign securities markets comprising the NDX may have less liquidity and may be more volatile than U.S. or other securities markets and market developments may affect foreign markets differently from U.S. or other securities markets. Direct or indirect government intervention to stabilize these foreign securities markets, as well as cross-shareholdings in foreign companies, may affect trading prices and volumes in these markets. Also, there is generally less publicly available information about foreign companies than about those U.S. companies that are subject to the reporting requirements of the SEC, and foreign companies are subject to accounting, auditing and financial reporting standards and requirements that differ from those applicable to U.S. reporting companies.

Prices of securities in foreign countries are subject to political, economic, financial and social factors that apply in those geographical regions. These factors, which could negatively affect those securities markets, include the possibility of recent or future changes in a foreign government's economic and fiscal policies, the possible imposition of, or changes in, currency exchange laws or other laws or restrictions applicable to foreign companies or investments in foreign equity securities and the possibility of fluctuations in the rate of exchange between currencies, the possibility of outbreaks of hostility and political instability and the possibility of natural disaster or adverse public health developments in the region. Moreover, foreign economies may differ favorably or unfavorably from the U.S. economy in important respects such as growth of gross national product, rate of inflation, capital reinvestment, resources and self-sufficiency.

The notes are subject to risks associated with small-size capitalization companies.

The stocks comprising the RTY are issued by companies with small-sized market capitalization. The stock prices of small-size companies may be more volatile than stock prices of large capitalization companies. Small-size capitalization companies may be less able to withstand adverse economic, market, trade and competitive conditions relative to larger companies. Small-size capitalization companies may also be more susceptible to adverse developments related to their products or services.

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500[®] Index, the Nasdaq-100 Index[®] and the Russell 2000[®] Index, due March , 2028

Additional Terms of the Notes

The provisions of this section supersede and replace the fifth to the eighth paragraphs in “Description of the Notes—The Starting Value, the Observation Value and the Ending Value—Observation Value” in product supplement EQUITY CYN-2.

If, with respect to an Index, a Market Disruption Event exists on any Market Measure Business Day during an Observation Period (other than the final Observation Period End Date), then such date will be excluded from the Observation Period for such Index; provided, however, that if a Market Disruption Event exists or continues for such Index for five or more consecutive scheduled Market Measure Business Days during an Observation Period, then such fifth consecutive day and each following day in the Observation Period until the occurrence of a Market Measure Business Day without a Market Disruption Event will nonetheless be part of the Observation Period for that Index and the Observation Value of that Index will be determined (or, if not determinable, estimated) for such days by the calculation agent in a manner which the calculation agent considers commercially reasonable under the circumstances. For the avoidance of doubt, an Observation Period End Date (other than the final Observation Period End Date) will not be postponed for any Index, and each Observation Period (other than the final Observation Period) will not be extended. If the final Observation Period End Date is determined by the calculation agent not to be a non-Market Measure Business Day, or if there is a Market Disruption Event on that day, the final Observation Period End Date will be postponed as described beginning on page PS-37 of product supplement EQUITY CYN-2 under “—Notes with a Maturity Valuation Period which Consists of Only One Scheduled Calculation Day”, as if such Observation Period End Date were a “calculation day”, and the final Observation Period will be extended to include the last final Observation Period End Date as postponed.

For the avoidance of doubt, the occurrence of a Market Disruption Event as to any Index will not impact any other Index that is not so affected.

The Indices

All disclosures contained in this term sheet regarding each Index, including, without limitation, its make-up, method of calculation, and changes in its components, have been derived from publicly available sources. The information reflects the policies of, and is subject to change by, S&P Dow Jones Indices LLC, the sponsor of the SPX, Nasdaq, Inc., the sponsor of the NDX, and FTSE Russell, the sponsor of the RTY (collectively, the "Index sponsors"). The Index sponsors, which license the copyright and all other rights to its applicable Index, have no obligation to continue to publish, and may discontinue publication of, its applicable Index. The consequences of any Index sponsor discontinuing publication of the applicable Index are discussed in the section of the accompanying product supplement beginning on page PS-40 entitled "Description of the Notes—Discontinuance of an Index." None of us, BAC, the calculation agent, MLPF&S or BofAS accepts any responsibility for the calculation, maintenance or publication of any Index or any successor index.

The S&P 500[®] Index

The SPX includes a representative sample of 500 companies in leading industries of the U.S. economy. The SPX is intended to provide an indication of the pattern of common stock price movement. The calculation of the level of the SPX is based on the relative value of the aggregate market value of the common stocks of 500 companies as of a particular time compared to the aggregate average market value of the common stocks of 500 similar companies during the base period of the years 1941 through 1943.

The SPX includes companies from eleven main groups: Communication Services; Consumer Discretionary; Consumer Staples; Energy; Financials; Health Care; Industrials; Information Technology; Real Estate; Materials; and Utilities. S&P Dow Jones Indices LLC ("SPDJI"), the sponsor of the SPX, may from time to time, in its sole discretion, add companies to, or delete companies from, the SPX to achieve the objectives stated above.

SPDJI calculates the SPX by reference to the prices of the constituent stocks of the SPX without taking account of the value of dividends paid on those stocks. As a result, the return on the notes will not reflect the return you would realize if you actually owned the SPX constituent stocks and received the dividends paid on those stocks.

Computation of the SPX

While SPDJI currently employs the following methodology to calculate the SPX, no assurance can be given that SPDJI will not modify or change this methodology in a manner that may affect payments on the notes.

Historically, the market value of any component stock of the SPX was calculated as the product of the market price per share and the number of then outstanding shares of such component stock. In March 2005, SPDJI began shifting the SPX halfway from a market capitalization weighted formula to a float-adjusted formula, before moving the SPX to full float adjustment on September 16, 2005. SPDJI's criteria for selecting stocks for the SPX did not change with the shift to float adjustment. However, the adjustment affects each company's weight in the SPX.

Under float adjustment, the share counts used in calculating the SPX reflect only those shares that are available to investors, not all of a company's outstanding shares. Float adjustment excludes shares that are closely held by control groups, other publicly traded companies or government agencies.

In September 2012, all shareholdings representing more than 5% of a stock's outstanding shares, other than holdings by "block owners," were removed from the float for purposes of calculating the SPX. Generally, these "control holders" will include officers and directors, private equity, venture capital and special equity firms, other publicly traded companies that hold shares for control, strategic partners, holders of restricted shares, ESOPs, employee and family trusts, foundations associated with the company, holders of unlisted share classes of stock, government entities at all levels (other than government retirement/pension funds) and any individual person who controls a 5% or greater stake in a company as reported in regulatory filings. However, holdings by block owners, such as depository banks, pension funds, mutual funds and ETF providers, 401(k) plans of the company, government retirement/pension funds, investment funds of insurance companies, asset managers and investment funds, independent foundations and savings and investment plans, will ordinarily be considered part of the float.

Treasury stock, stock options, restricted shares, equity participation units, warrants, preferred stock, convertible stock, and rights are not part of the float. Shares held in a trust to allow investors in countries outside the country of domicile, such as depository shares and Canadian exchangeable shares, are normally part of the float unless those shares form a control block. If a company has multiple classes of stock outstanding, shares in an unlisted or non-traded class are treated as a control block.

For each stock, an investable weight factor ("IWF") is calculated by dividing the available float shares by the total shares outstanding. Available float shares are defined as the total shares outstanding less shares held by control holders. This calculation is subject to a 5% minimum threshold for control blocks. For example, if a company's officers and directors hold 3% of the company's shares, and no other control group holds 5% of the company's shares, SPDJI would assign that company an IWF of 1.00, as no control group meets the 5% threshold. However, if a company's officers and directors hold 3% of the company's shares and another control group holds 20% of the company's shares, SPDJI would assign an IWF of 0.77, reflecting the fact that 23% of the company's outstanding shares are considered to be held for control. As of July 31, 2017, companies with multiple share class lines are no longer eligible for inclusion in the SPX. Constituents of the SPX prior to July 31, 2017 with multiple share class lines will be grandfathered in and continue to be included.

in the SPX. If a constituent company of the SPX reorganizes into a multiple share class line structure, that company will remain in the SPX at the discretion of the S&P Index Committee in order to minimize turnover.

The SPX is calculated using a base-weighted aggregate methodology. The level of the SPX reflects the total market value of all component stocks relative to the base period of the years 1941 through 1943. An indexed number is used to represent the results of this calculation in order to make the level easier to work with and track over time. The actual total market value of the component stocks during the base period of the years 1941 through 1943 has been set to an indexed level of 10. This is often indicated by the notation 1941- 43 = 10. In practice, the daily calculation of the SPX is computed by dividing the total market value of the component stocks by the "index divisor." By itself, the index divisor is an arbitrary number. However, in the context of the calculation of the SPX, it serves as a link to the original base period level of the SPX. The index divisor keeps the SPX comparable over time and is the manipulation point for all adjustments to the SPX, which is index maintenance.

Index Maintenance

Index maintenance includes monitoring and completing the adjustments for company additions and deletions, share changes, stock splits, stock dividends, and stock price adjustments due to company restructuring or spinoffs. Some corporate actions, such as stock splits and stock dividends, require changes in the common shares outstanding and the stock prices of the companies in the SPX, and do not require index divisor adjustments.

To prevent the level of the SPX from changing due to corporate actions, corporate actions which affect the total market value of the SPX require an index divisor adjustment. By adjusting the index divisor for the change in market value, the level of the SPX remains constant and does not reflect the corporate actions of individual companies in the SPX. Index divisor adjustments are made after the close of trading and after the calculation of the SPX closing level.

Changes in a company's shares outstanding of 5.00% or more due to mergers, acquisitions, public offerings, tender offers, Dutch auctions, or exchange offers are made as soon as reasonably possible. Share changes due to mergers or acquisitions of publicly held companies that trade on a major exchange are implemented when the transaction occurs, even if both of the companies are not in the same headline index, and regardless of the size of the change. All other changes of 5.00% or more (due to, for example, company stock repurchases, private placements, redemptions, exercise of options, warrants, conversion of preferred stock, notes, debt, equity participation units, at-the-market offerings, or other recapitalizations) are made weekly and are announced on Fridays for implementation after the close of trading on the following Friday. Changes of less than 5.00% are accumulated and made quarterly on the third Friday of March, June, September, and December, and are usually announced two to five days prior.

If a change in a company's shares outstanding of 5.00% or more causes a company's IWF to change by five percentage points or more, the IWF is updated at the same time as the share change. IWF changes resulting from partial tender offers are considered on a case by case basis.

The following graph shows the daily historical performance of the SPX in the period from January 1, 2015 through February 26, 2025. We obtained this historical data from Bloomberg L.P. We have not independently verified the accuracy or completeness of the information obtained from Bloomberg L.P. On February 26, 2025, the closing level of the SPX was 5,956.06.

Historical Performance of the SPX

The Nasdaq-100 Index[®]

The NDX is intended to measure the performance of the 100 largest domestic and international non-financial securities listed on The Nasdaq Stock Market ("NASDAQ") based on market capitalization. The NDX reflects companies across major industry groups including computer hardware and software, telecommunications, retail/wholesale trade and biotechnology. It does not contain securities of financial companies including investment companies.

The NDX began trading on January 31, 1985 at a base value of 125.00. The NDX is calculated and published by Nasdaq, Inc. In administering the NDX, Nasdaq, Inc. will exercise reasonable discretion as it deems appropriate.

Underlying Stock Eligibility Criteria

NDX eligibility is limited to specific security types only. The security types eligible for the NDX include foreign or domestic common stocks, ordinary shares, ADRs and tracking stocks. Security types not included in the NDX are closed-end funds, convertible debt securities, exchange traded funds, limited liability companies, limited partnership interests, preferred stocks, rights, shares or units of beneficial interest, warrants, units, and other derivative securities. The NDX does not contain securities of investment companies. For purposes of the NDX eligibility criteria, if the security is a depositary receipt representing a security of a non-U.S. issuer, then references to the "issuer" are references to the issuer of the underlying security.

Initial Eligibility Criteria

To be eligible for initial inclusion in the NDX, a security must be listed on NASDAQ and meet the following criteria:

- the security's U.S. listing must be exclusively on the Nasdaq Global Select Market or the Nasdaq Global Market (unless the security was dually listed on another U.S. market prior to January 1, 2004 and has continuously maintained such listing);
- the security must be of a non-financial company;
- the security may not be issued by an issuer currently in bankruptcy proceedings;
- the security must have a minimum three-month average daily trading volume of at least 200,000 shares;
- if the issuer of the security is organized under the laws of a jurisdiction outside the U.S., then such security must have listed options on a recognized options market in the U.S. or be eligible for listed-options trading on a recognized options market in the U.S.;
- the issuer of the security may not have entered into a definitive agreement or other arrangement which would likely result in the security no longer being eligible for inclusion in the NDX;
- the issuer of the security may not have annual financial statements with an audit opinion that is currently withdrawn;
- the issuer of the security must have "seasoned" on NASDAQ, the New York Stock Exchange or NYSE Amex. Generally, a company is considered to be seasoned if it has been listed on a market for at least three full months (excluding the first month of initial listing).

Continued Eligibility Criteria

In addition, to be eligible for continued inclusion in the NDX, the following criteria apply:

- the security's U.S. listing must be exclusively on the Nasdaq Global Select Market or the Nasdaq Global Market;
- the security must be of a non-financial company;
- the security may not be issued by an issuer currently in bankruptcy proceedings;
- the security must have a minimum three-month average daily trading volume of at least 200,000 shares;
- if the issuer of the security is organized under the laws of a jurisdiction outside the U.S., then such security must have listed options on a recognized options market in the U.S. or be eligible for listed-options trading on a recognized options market in the U.S. (measured annually during the ranking review process);
- the security must have an adjusted market capitalization equal to or exceeding 0.10% of the aggregate adjusted market capitalization of the NDX at each month-end. In the event a company does not meet this criterion for two consecutive month-ends, it will be removed from the NDX effective after the close of trading on the third Friday of the following month; and
- the issuer of the security may not have annual financial statements with an audit opinion that is currently withdrawn.

Computation of the NDX

The value of the NDX equals the aggregate value of the NDX share weights (the "NDX Shares") of each of the NDX securities multiplied by each such security's last sale price (last sale price refers to the last sale price on NASDAQ), and divided by the divisor of the NDX. If trading in an NDX security is halted while the market is open, the last traded price for that security is used for all NDX computations until trading resumes. If trading is halted before the market is open, the previous day's last sale price is used. The formula for determining

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500[®] Index, the Nasdaq-100 Index[®] and the Russell 2000[®] Index, due March , 2028

the NDX value is as follows:

$$\frac{\text{Aggregated Adjusted Market Value}}{\text{Divisor}}$$

The NDX is ordinarily calculated without regard to cash dividends on NDX securities. The NDX is calculated during the trading day and is disseminated once per second from 09:30:01 to 17:16:00 ET. The closing level of the NDX may change up until 17:15:00 ET due to corrections to the last sale price of the NDX securities. The official closing value of the NDX is ordinarily disseminated at 17:16:00 ET.

NDX Maintenance

Changes to NDX Constituents

Changes to the NDX constituents may be made during the annual ranking review. In addition, if at any time during the year other than the annual review, it is determined that an NDX security issuer no longer meets the criteria for continued inclusion in the NDX, or is otherwise determined to have become ineligible for continued inclusion in the NDX, it is replaced with the largest market capitalization issuer not currently in the NDX that meets the applicable eligibility criteria for initial inclusion in the NDX.

Ordinarily, a security will be removed from the NDX at its last sale price. However, if at the time of its removal the NDX security is halted from trading on its primary listing market and an official closing price cannot readily be determined, the NDX security may, in Nasdaq, Inc.'s discretion, be removed at a price of \$0.00000001 ("zero price"). This zero price will be applied to the NDX security after the close of the market but prior to the time the official closing value of the NDX is disseminated.

Divisor Adjustments

The divisor is adjusted to ensure that changes in the NDX constituents either by corporate actions (that adjust either the price or shares of an NDX security) or NDX participation outside of trading hours do not affect the value of the NDX. All divisor changes occur after the close of the applicable index security markets.

Quarterly NDX Rebalancing

The NDX will be rebalanced on a quarterly basis if it is determined that (1) the current weight of the single NDX security with the largest market capitalization is greater than 24.0% of the NDX or (2) the collective weight of those securities whose individual current weights are in excess of 4.5% exceeds 48.0% of the NDX. In addition, a "special rebalancing" of the NDX may be conducted at any time if Nasdaq, Inc. determines it necessary to maintain the integrity and continuity of the NDX. If either one or both of the above weight distribution conditions are met upon quarterly review, or Nasdaq, Inc. determines that a special rebalancing is necessary, a weight rebalancing will be performed.

If the first weight distribution condition is met and the current weight of the single NDX security with the largest market capitalization is greater than 24.0%, then the weights of all securities with current weights greater than 1.0% ("large securities") will be scaled down proportionately toward 1.0% until the adjusted weight of the single largest NDX security reaches 20.0%.

If the second weight distribution condition is met and the collective weight of those securities whose individual current weights are in excess of 4.5% (or adjusted weights in accordance with the previous step, if applicable) exceeds 48.0% of the NDX, then the weights of all such large securities in that group will be scaled down proportionately toward 1.0% until their collective weight, so adjusted, is equal to 40.0%.

The aggregate weight reduction among the large securities resulting from either or both of the rebalancing steps above will then be redistributed to those securities with weightings of less than 1.0% ("small securities") in the following manner. In the first iteration, the weight of the largest small security will be scaled upwards by a factor which sets it equal to the average NDX weight of 1.0%. The weights of each of the smaller remaining small securities will be scaled up by the same factor reduced in relation to each security's relative ranking among the small securities such that the smaller the NDX security in the ranking, the less its weight will be scaled upward. This is intended to reduce the market impact of the weight rebalancing on the smallest component securities in the NDX.

In the second iteration of the small security rebalancing, the weight of the second largest small security, already adjusted in the first iteration, will be scaled upwards by a factor which sets it equal to the average NDX weight of 1.0%. The weights of each of the smaller remaining small securities will be scaled up by this same factor reduced in relation to each security's relative ranking among the small securities such that, once again, the smaller the security in the ranking, the less its weight will be scaled upward. Additional iterations will be performed until the accumulated increase in weight among the small securities equals the aggregate weight reduction among the large securities that resulted from the rebalancing in accordance with the two weight distribution conditions discussed above.

Finally, to complete the rebalancing process, once the final weighting percentages for each NDX security have been set, the NDX Shares will be determined anew based upon the last sale prices and aggregate capitalization of the NDX at the close of trading on the

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500® Index, the Nasdaq-100 Index® and the Russell 2000® Index, due March , 2028

last calendar day in February, May, August and November. Changes to the NDX Shares will be made effective after the close of trading on the third Friday in March, June, September and December, and an adjustment to the divisor is made to ensure continuity of the NDX. Ordinarily, new rebalanced NDX Shares will be determined by applying the above procedures to the current NDX Shares. However, Nasdaq, Inc. may, from time to time, determine rebalanced weights, if necessary, by applying the above procedure to the actual current market capitalization of the NDX components. In such instances, Nasdaq, Inc. would announce the different basis for rebalancing prior to its implementation.

During the quarterly rebalancing, data is cutoff as of the previous month end and no changes are made to the NDX from that cutoff until the quarterly index share change effective date, except in the case of changes due to corporate actions with an ex-date.

Adjustments for Corporate Actions

Changes in the price and/or NDX Shares driven by corporate events such as stock dividends, splits, and certain spin-offs and rights issuances will be adjusted on the ex-date. If the change in total shares outstanding arising from other corporate actions is greater than or equal to 10.0%, the change will be made as soon as practicable. Otherwise, if the change in total shares outstanding is less than 10.0%, then all such changes are accumulated and made effective at one time on a quarterly basis after the close of trading on the third Friday in each of March, June, September, and December. The NDX Shares are derived from the security's total shares outstanding. The NDX Shares are adjusted by the same percentage amount by which the total shares outstanding have changed.

The following graph shows the daily historical performance of the NDX in the period from January 1, 2015 through February 26, 2025. We obtained this historical data from Bloomberg L.P. We have not independently verified the accuracy or completeness of the information obtained from Bloomberg L.P. On February 26, 2025, the closing level of the NDX was 21,132.92.

Historical Performance of the NDX

This historical data on the NDX is not necessarily indicative of the future performance of the NDX or what the value of the notes may be. Any historical upward or downward trend in the level of the NDX during any period set forth above is not an indication that the level of the NDX is more or less likely to increase or decrease at any time over the term of the notes.

Before investing in the notes, you should consult publicly available sources for the levels of the NDX.

The Russell 2000[®] Index

The RTY was developed by Russell Investments ("Russell") before FTSE International Limited and Russell combined in 2015 to create FTSE Russell, which is wholly owned by London Stock Exchange Group. Additional information on the RTY is available at the following website: <http://www.ftserussell.com>. No information on that website is deemed to be included or incorporated by reference in this pricing supplement.

Russell began dissemination of the RTY on January 1, 1984. FTSE Russell calculates and publishes the RTY. The RTY was set to 135 as of the close of business on December 31, 1986. The RTY is designed to track the performance of the small capitalization segment of the U.S. equity market. As a subset of the Russell 3000[®] Index, the RTY consists of the smallest 2,000 companies included in the Russell 3000[®] Index. The Russell 3000[®] Index measures the performance of the largest 3,000 U.S. companies, representing approximately 98% of the investable U.S. equity market. The RTY is determined, comprised, and calculated by FTSE Russell without regard to the notes.

Selection of Stocks Comprising the RTY

Each company eligible for inclusion in the RTY must be classified as a U.S. company under FTSE Russell's country-assignment methodology. If a company is incorporated, has a stated headquarters location, and trades in the same country (American Depositary Receipts and American Depositary Shares are not eligible), then the company is assigned to its country of incorporation. If any of the three factors are not the same, FTSE Russell defines three Home Country Indicators ("HCIs"): country of incorporation, country of headquarters, and country of the most liquid exchange (as defined by a two-year average daily dollar trading volume) from all exchanges within a country. Using the HCIs, FTSE Russell compares the primary location of the company's assets with the three HCIs. If the primary location of its assets matches any of the HCIs, then the company is assigned to the primary location of its assets. If there is insufficient information to determine the country in which the company's assets are primarily located, FTSE Russell will use the country from which the company's revenues are primarily derived for the comparison with the three HCIs in a similar manner. FTSE Russell uses the average of two years of assets or revenues data to reduce potential turnover. If conclusive country details cannot be derived from assets or revenues data, FTSE Russell will assign the company to the country of its headquarters, which is defined as the address of the company's principal executive offices, unless that country is a Benefit Driven Incorporation ("BDI") country, in which case the company will be assigned to the country of its most liquid stock exchange. BDI countries include: Anguilla, Antigua and Barbuda, Bahamas, Barbados, Belize, Bermuda, Bonaire, British Virgin Islands, Cayman Islands, Channel Islands, Cook Islands, Curacao, Faroe Islands, Gibraltar, Guernsey, Isle of Man, Jersey, Liberia, Marshall Islands, Panama, Saba, Sint Eustatius, Sint Maarten, and Turks and Caicos Islands. For any companies incorporated or headquartered in a U.S. territory, including Puerto Rico, Guam, and U.S. Virgin Islands, a U.S. HCI is assigned.

All securities eligible for inclusion in the RTY must trade on a major U.S. exchange. Stocks must have a closing price at or above \$1.00 on their primary exchange on the last trading day in May to be eligible for inclusion during annual reconstitution. However, in order to reduce unnecessary turnover, if an existing member's closing price is less than \$1.00 on the last day of May, it will be considered eligible if the average of the daily closing prices (from its primary exchange) during the month of May is equal to or greater than \$1.00. Initial public offerings are added each quarter and must have a closing price at or above \$1.00 on the last day of their eligibility period in order to qualify for index inclusion. If an existing stock does not trade on the "rank day" (typically the last trading day in May but a confirmed timetable is announced each spring) but does have a closing price at or above \$1.00 on another eligible U.S. exchange, that stock will be eligible for inclusion.

An important criterion used to determine the list of securities eligible for the RTY is total market capitalization, which is defined as the market price as of the last trading day in May for those securities being considered at annual reconstitution times the total number of shares outstanding. Where applicable, common stock, non-restricted exchangeable shares and partnership units/membership interests are used to determine market capitalization. Any other form of shares such as preferred stock, convertible preferred stock, redeemable shares, participating preferred stock, warrants and rights, installment receipts or trust receipts, are excluded from the calculation. If multiple share classes of common stock exist, they are combined. In cases where the common stock share classes act independently of each other (e.g., tracking stocks), each class is considered for inclusion separately. If multiple share classes exist, the pricing vehicle will be designated as the share class with the highest two-year trading volume as of the rank day in May.

Companies with a total market capitalization of less than \$30 million are not eligible for the RTY. Similarly, companies with only 5% or less of their shares available in the marketplace are not eligible for the RTY. Royalty trusts, limited liability companies, closed-end investment companies (companies that are required to report Acquired Fund Fees and Expenses, as defined by the SEC, including business development companies), blank check companies, special purpose acquisition companies, and limited partnerships are also ineligible for inclusion. Bulletin board, pink sheets, and over-the-counter traded securities are not eligible for inclusion. Exchange traded funds and mutual funds are also excluded.

Annual reconstitution is a process by which the RTY is completely rebuilt. Based on closing levels of the company's common stock on its primary exchange on the rank day of May of each year, FTSE Russell reconstitutes the composition of the RTY using the then existing market capitalizations of eligible companies. Reconstitution of the RTY occurs on the last Friday in June or, when the last Friday in June is the 29th or 30th, reconstitution occurs on the prior Friday. In addition, FTSE Russell adds initial public offerings to the RTY on a quarterly basis based on total market capitalization ranking within the market-adjusted capitalization breaks established during the most recent reconstitution. After membership is determined, a security's shares are adjusted to include only those shares available to the public. This is often referred to as "free float." The purpose of the adjustment is to exclude from market calculations the capitalization that is not available for purchase and is not part of the investable opportunity set.

Issuer Callable Contingent Coupon Barrier Notes (with Daily Coupon Observation)

Linked to the Worst-Performing of the S&P 500® Index, the Nasdaq-100 Index® and the Russell 2000® Index, due March , 2028

The following graph shows the daily historical performance of the RTY in the period from January 1, 2015 through February 26, 2025. We obtained this historical data from Bloomberg L.P. We have not independently verified the accuracy or completeness of the information obtained from Bloomberg L.P. On February 26, 2025, the closing level of the RTY was 2,174.174.

Supplement to the Plan of Distribution; Conflicts of Interest

Under our distribution agreement with BofAS, BofAS will purchase the notes from us as principal at the public offering price indicated on the cover of this term sheet, less the indicated underwriting discount.

MLPF&S will purchase the notes from BofAS for resale, and will receive a selling concession in connection with the sale of the notes in an amount up to the full amount of underwriting discount set forth on the cover of this term sheet.

We will pay a fee to LFT Securities, LLC for providing certain electronic platform services with respect to this offering, which will reduce the economic terms of the notes to you. An affiliate of BofAS has an ownership interest in LFT Securities, LLC.

MLPF&S and BofAS, each a broker-dealer subsidiary of BAC, are members of the Financial Industry Regulatory Authority, Inc. ("FINRA") and will participate as selling agent in the case of BofAS, and as dealer, in the case of MLPF&S, in the distribution of the notes. Accordingly, offerings of the notes will conform to the requirements of Rule 5121 applicable to FINRA members. MLPF&S may not make sales in this offering to any of its discretionary accounts without the prior written approval of the account holder.

We may deliver the notes against payment therefor in New York, New York on a date that is greater than one business day following the pricing date. Under Rule 15c6-1 of the Securities Exchange Act of 1934, trades in the secondary market generally are required to settle in one business day, unless the parties to any such trade expressly agree otherwise. Accordingly, if the initial settlement of the notes occurs more than one business day from the pricing date, purchasers who wish to trade the notes more than one business day prior to the original issue date will be required to specify alternative settlement arrangements to prevent a failed settlement.

The notes will not be listed on any securities exchange. In the original offering of the notes, the notes will be sold in minimum investment amounts of 25,000 units. If you place an order to purchase the notes, you are consenting to MLPF&S and/or one of its affiliates acting as a principal in effecting the transaction for your account.

MLPF&S and BofAS may repurchase and resell the notes, with repurchases and resales being made at prices related to then-prevailing market prices or at negotiated prices, and these will include MLPF&S's and BofAS's trading commissions and mark-ups or mark-downs. MLPF&S and BofAS may act as principal or agent in these market-making transactions; however, neither is obligated to engage in any such transactions. At their discretion, for a short, undetermined initial period after the issuance of the notes, MLPF&S and BofAS may offer to buy the notes in the secondary market at a price that may exceed the initial estimated value of the notes. Any price offered by MLPF&S or BofAS for the notes will be based on then-prevailing market conditions and other considerations, including the performance of the Indices and the remaining term of the notes. However, neither we nor any of our affiliates is obligated to purchase your notes at any price, or at any time, and we cannot assure you that we or any of our affiliates will purchase your notes at a price that equals or exceeds the initial estimated value of the notes.

The value of the notes shown on your account statement will be based on BofAS's estimate of the value of the notes if BofAS or another of our affiliates were to make a market in the notes, which it is not obligated to do. That estimate will be based upon the price that BofAS may pay for the notes in light of then-prevailing market conditions and other considerations, as mentioned above, and will include transaction costs. At certain times, this price may be higher than or lower than the initial estimated value of the notes.

Structuring the Notes

The notes are our debt securities, the return on which is linked to the performance of the Indices. The related guarantees are BAC's obligations. As is the case for all of our and BAC's respective debt securities, including our market-linked notes, the economic terms of the notes reflect our and BAC's actual or perceived creditworthiness at the time of pricing. In addition, because market-linked notes result in increased operational, funding and liability management costs to us and BAC, BAC typically borrows the funds under these types of notes at a rate that is more favorable to BAC than the rate that it might pay for a conventional fixed or floating rate debt security. This rate, which we refer to in this term sheet as BAC's internal funding rate, is typically lower than the rate BAC would pay when it issues conventional fixed or floating rate debt securities. This generally relatively lower internal funding rate, which is reflected in the economic terms of the notes, along with the fees and charges associated with market-linked notes, typically results in the initial estimated value of the notes on the pricing date being less than their public offering price.

At maturity, if not previously called, we are required to pay the Redemption Amount to holders of the notes, which will be calculated based on the performance of the Indices and the \$10 per unit principal amount. In order to meet these payment obligations, at the time we issue the notes, we may choose to enter into certain hedging arrangements (which may include call options, put options or other derivatives) with BofAS or one of our other affiliates. The terms of these hedging arrangements are determined by seeking bids from market participants, including MLPF&S, BofAS and its affiliates, and take into account a number of factors, including our and BAC's creditworthiness, interest rate movements, the volatility of the Indices, the tenor of the notes and the tenor of the hedging arrangements. The economic terms of the notes and their initial estimated value depend in part on the terms of these hedging arrangements. These hedging arrangements are expected to result in a profit to those engaging in the hedging activity, which could be more or less than initially expected, but could also result in a loss.

For further information, see "Risk Factors—Valuation- and Market-related Risks" and "—Conflict-related Risks" beginning on page PS-16 and PS-19, respectively, and "Use of Proceeds" on page PS-29 of the accompanying product supplement.

Summary Tax Consequences

You should consider the U.S. federal income tax consequences of an investment in the notes, including the following:

- There is no statutory, judicial, or administrative authority directly addressing the characterization of the notes.
- You agree with us (in the absence of an administrative determination, or judicial ruling to the contrary) to characterize and treat the notes for all tax purposes as a contingent income-bearing single financial contract with respect to the Market Measures.
- Under this characterization and tax treatment of the notes, a U.S. Holder (as defined in the prospectus) generally will recognize capital gain or loss upon maturity or upon a sale, exchange or redemption of the notes prior to maturity. This capital gain or loss generally will be long-term capital gain or loss if you held the notes for more than one year.
- No assurance can be given that the Internal Revenue Service ("IRS") or any court will agree with this characterization and tax treatment.
- We intend to take the position that any Contingent Coupon Payments constitute taxable ordinary income to a U.S. Holder at the time received or accrued, in accordance with the U.S. Holder's method of tax accounting.
- Because the U.S. federal income tax treatment of the Contingent Coupon Payments is uncertain, we (or the applicable paying agent) will withhold U.S. federal income tax at a 30% rate (or at a lower rate under an applicable income tax treaty) on the entire amount of any Contingent Coupon Payment made to a Non-U.S. Holder unless such payments are effectively connected with the conduct by the Non-U.S. Holder of a trade or business in the U.S. (in which case, to avoid withholding, the Non-U.S. Holder will be required to provide a Form W-8ECI). We (or the applicable paying agent) will not pay any additional amounts in respect of such withholding.
- Under current IRS guidance, withholding on "dividend equivalent" payments (as discussed in the product supplement), if any, will not apply to notes that are issued as of the date of this term sheet unless such notes are "delta-one" instruments.

You should consult your own tax advisor concerning the U.S. federal income tax consequences to you of acquiring, owning, and disposing of the notes, as well as any tax consequences arising under the laws of any state, local, foreign, or other tax jurisdiction and the possible effects of changes in U.S. federal or other tax laws. You should review carefully the discussion under the section entitled "U.S. Federal Income Tax Summary" beginning on page PS-51 of the accompanying product supplement.

Where You Can Find More Information

We and BAC have filed a registration statement (including a product supplement, a prospectus supplement, and a prospectus) with the SEC for the offering to which this term sheet relates. Before you invest, you should read the Note Prospectus, including this term sheet, and the other documents relating to this offering that we and BAC have filed with the SEC, for more complete information about us, BAC and this offering. You may get these documents without cost by visiting EDGAR on the SEC website at www.sec.gov. Alternatively, we, any agent, or any dealer participating in this offering will arrange to send you these documents if you so request by calling MLPF&S or BofAS toll-free at 1-800-294-1322.
