Hypothetical Payout Profile***

*** Not all call dates reflected; reflects only the first, seventh and thirteenth call dates for illustrative purposes only; assumes a Call Premium equal to the lowest possible Call Premium that may be determined on the Pricing Date.

If the Securities are not automatically called and the Ending Value is less than the Threshold Value, you will lose more than 25%, and possibly all, of the principal amount of your Securities on the Maturity Date.

Any positive return on the Securities will be limited to any applicable Call Premium, even if the closing level of the Underlying on the applicable Call Date significantly exceeds the Starting Value. You will not participate in any appreciation of the Underlying beyond any applicable Call Premium.

The initial estimated value of the Securities as of the pricing date is expected to be between \$914.25 and \$964.25 per Security, which is less than the public offering price. The actual value of your Securities at any time will reflect many factors and cannot be predicted with accuracy. See "Selected Risk Considerations" beginning on page PS-8 of the accompanying preliminary pricing supplement and "Structuring the Securities" on page PS-19 of the accompanying preliminary pricing supplement for additional information.
